

Join Us in the Fight Against Blood Reflux

While IV catheter usage is an indispensable form of IV therapy, it does have its risks. Blood can inadvertently reflux into a catheter in multiple ways, leading to several IV complications that can result in increased cost, nursing time and patient trauma.

LifeShield® TKO™ 4

LifeShield® TKO™ 5

Advanced by Design

- Designed to address the many known causes of blood reflux
- Non-pyrogenic, non-latex, non-PVC and metal-free
- Crystal clear: easy to see when blood has been properly flushed from the device
- Versatile: attaches to any standard luer connector
- Bi-directional valve helps reduce patient fluid loss
- Swabable to help ensure a clean site
- Ergonomic finger grips for excellent device control

An Easy-to-Use and Economical Choice

- Allows for easy uptake and training
- Works within current IV practices
- Enables caregivers to optimize delivery of care, spending less time and cost treating/flushing occluded lines

*Helping you "To Keep Open" against blood reflux:
the LifeShield TKO!*
